POWER UNITS

- **AXON EASY S**
- **AXON SIDE**

Power Units provide ultrafast high-power (DC) charging. The units are a ready-made concept for connecting satellites or pantographs and creating and expanding charging hubs. They support all electric vehicles. They are suitable for integration with all charging service providers.

MOBILE

- **PLUG CHARGER GO**
- **PLUG CHARGER**

Mobile charging stations (DC) that provide fast charging. These handy and portable devices are a viable support for charging in emergency situations but also provide the ability to recharge vehicles in any situation and locations. They support all electric vehicles. The chargers operate independently and do not need integration with charging service providers. They are ideal as equipment for electric vehicles.

PANTOGRAPH

→ **LINK CHARGER**

→ **LINK ONE**

Pantograph chargers provide ultrafast high-power (DC) charging. They are a unique mix of devices such as All in One, Power Unit, and even satellite in One. They are a ready-made concept for connecting with themselves and creating and expanding charging hubs. They support mostly E-Buses. They are suitable for integration with all charging service providers.

SOFTWARE

Nowadays information is the greatest asset. Every year, the number of devices we use for communication by means of various applications is growing. Very often, these applications make it possible not only to download data, but also to manage and control it. Charging stations are not different in this regard. Data preview in chargers eliminates operational risk, and the collected and analyzed data from networked charging stations enables drawing specific analytical conclusions.
